

# Laboratory Activity

## Web Systems and Technology

### Midterm

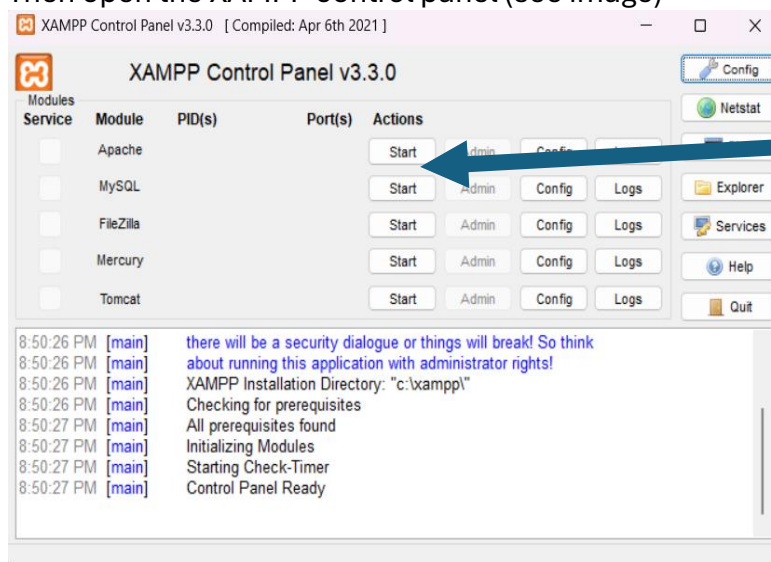

Mendoza John Mark R. C-334 IT

Procedure:

- Open your individual unit and check your current PHP version using the command prompt see sample image below : Write the command in the black provided

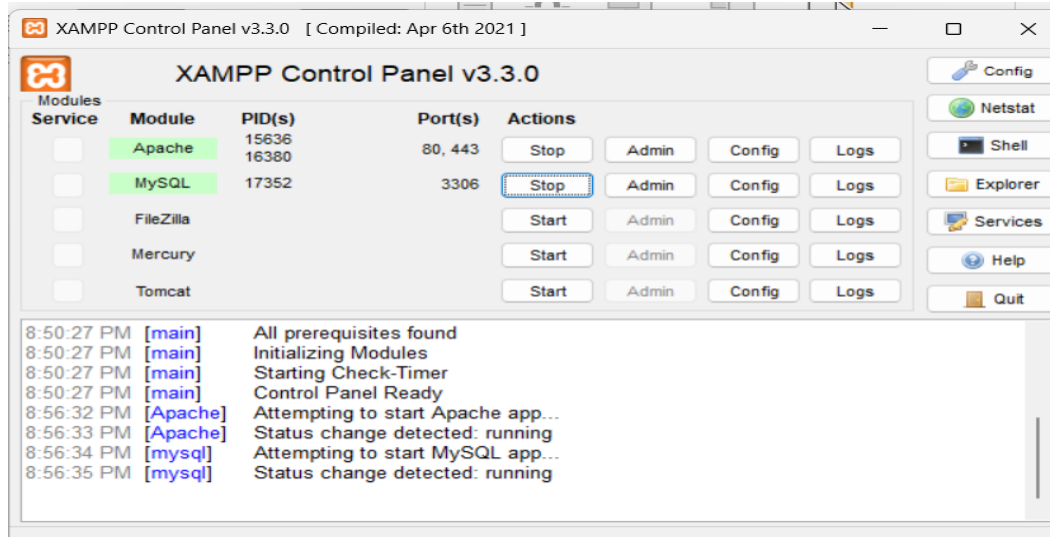

- Then open the XAMPP control panel (see image)

Make sure to click the Start button to open the Apache and MySQL

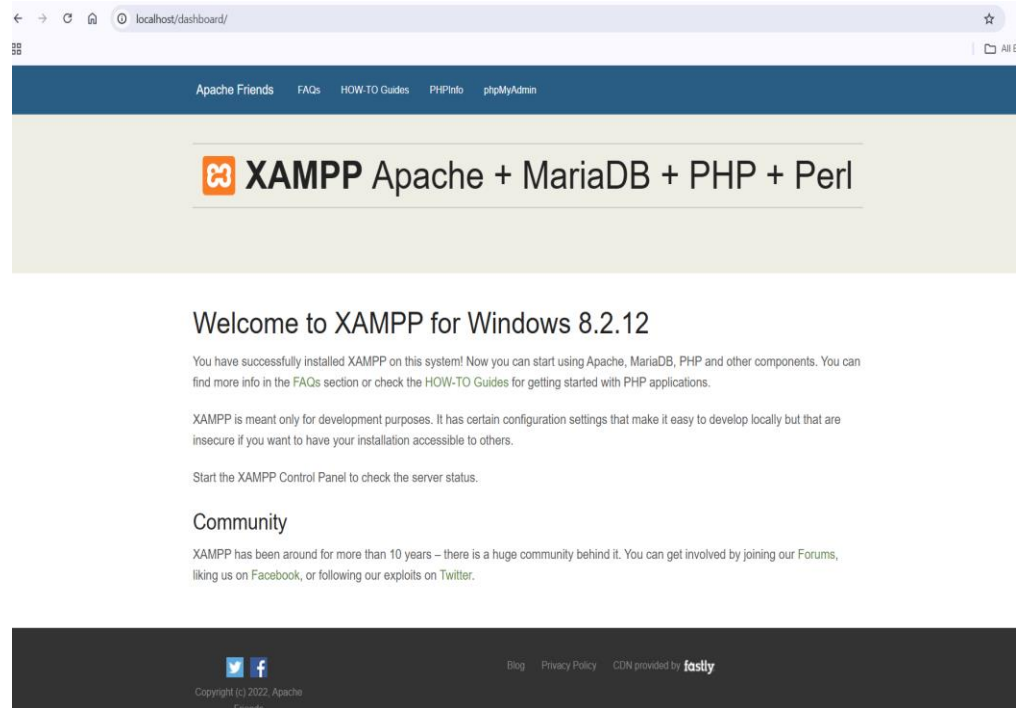

- Once it green your server is now running

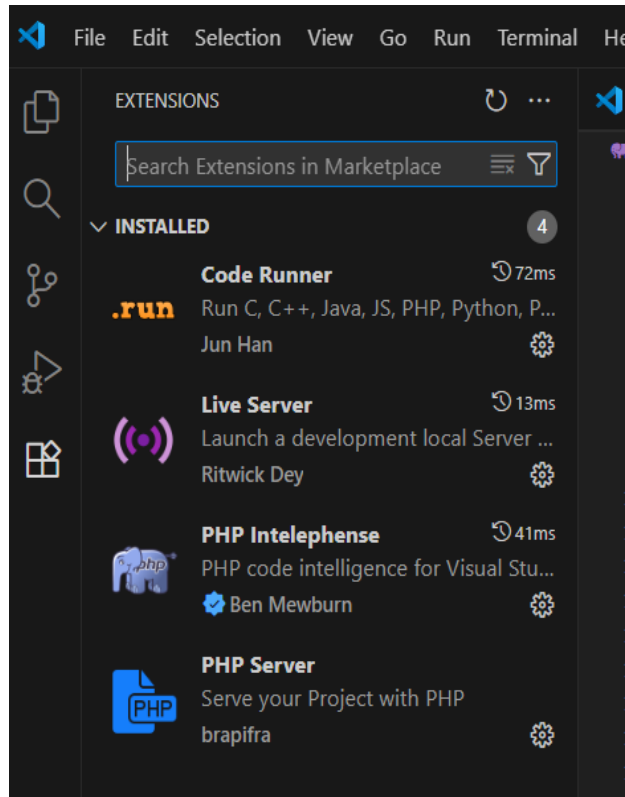

- Make sure to check the ports of Apache and MySQL as follows

Module	PID(s)	Port(s)
Apache	26368 3028	80, 443
MySQL	25340	3306

- Your now ready to test your server
- Access the XAMPP dashboard in a browser
  - Open your preferred web browser and type `http://localhost` into the address bar and press **Enter**.
  - If XAMPP is working correctly, you will see the XAMPP welcome page, which confirms the Apache web server is running.

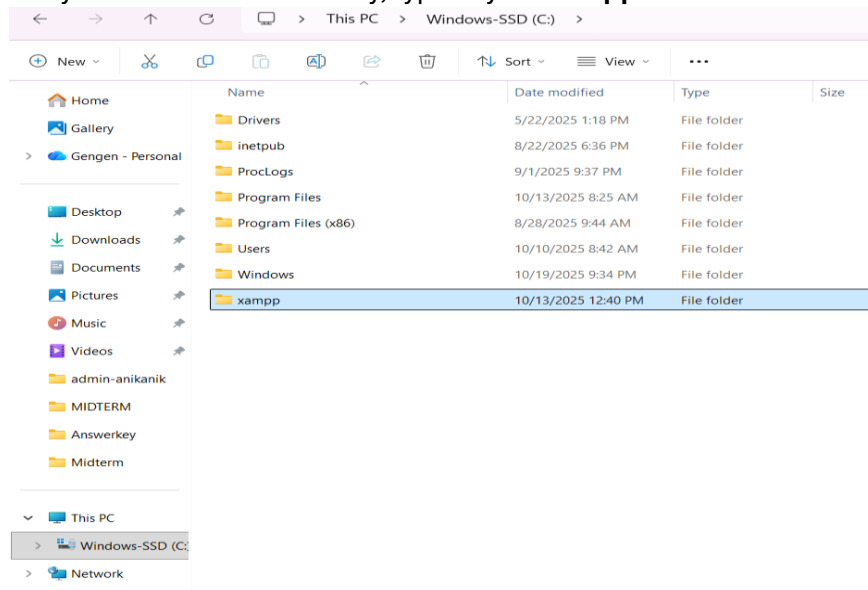

- Alternatively, you can type `http://127.0.0.1` to get the same result.
- Next, open your VS code app if the following Extension are available and properly installed
  - PHP server
  - Live server
  - PHP intelephense

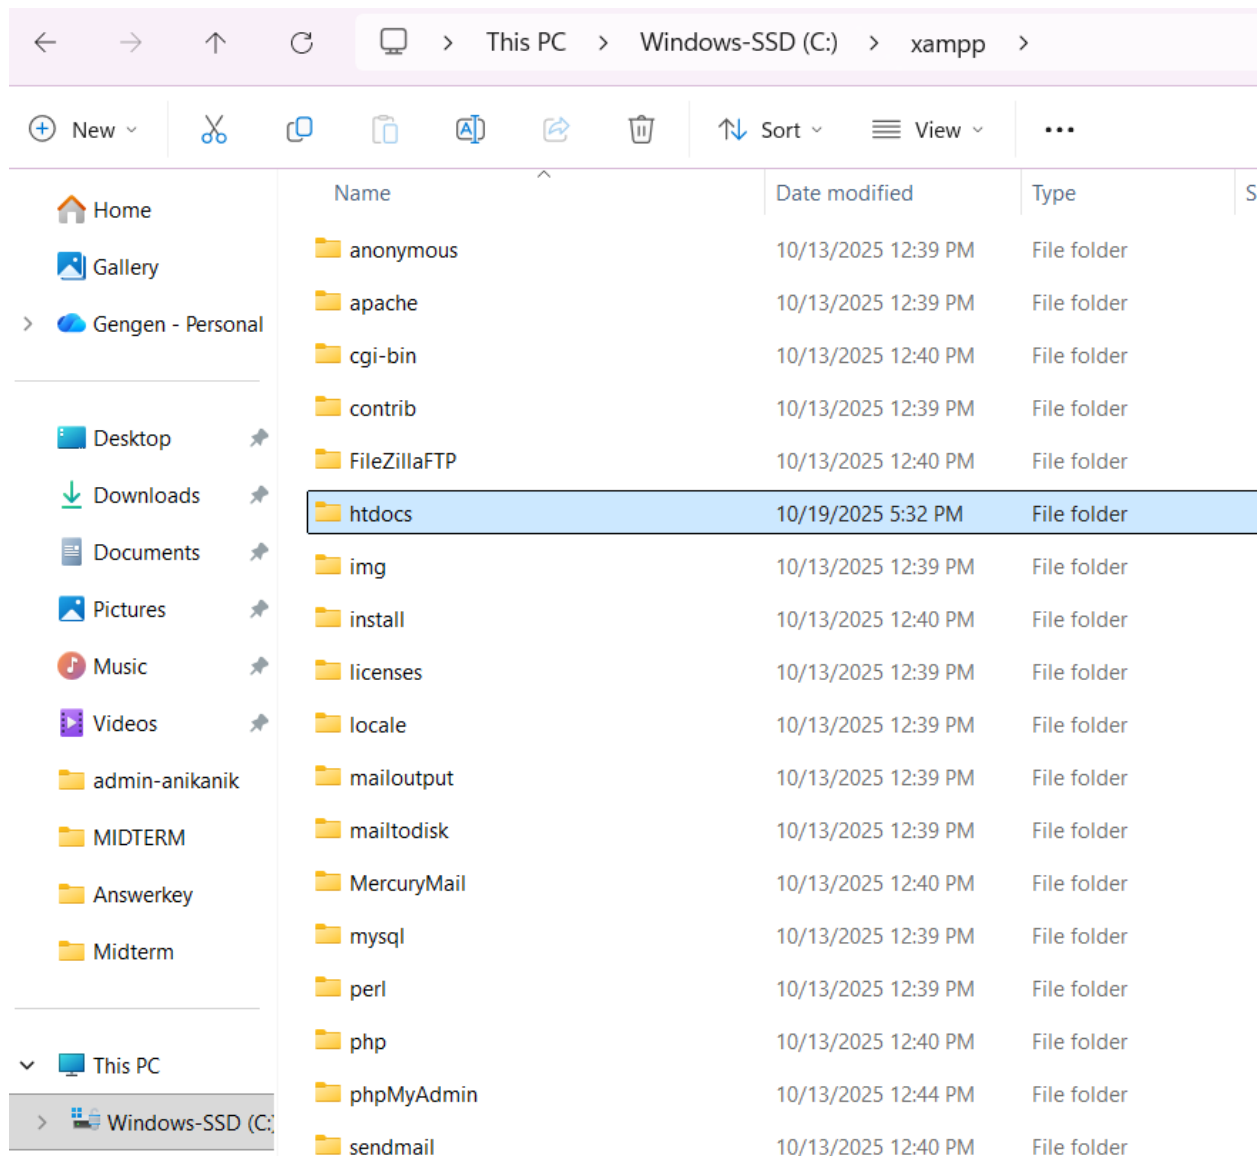

- Once installed start your first PHP code

### First thing first create a folder inside your XAMPP

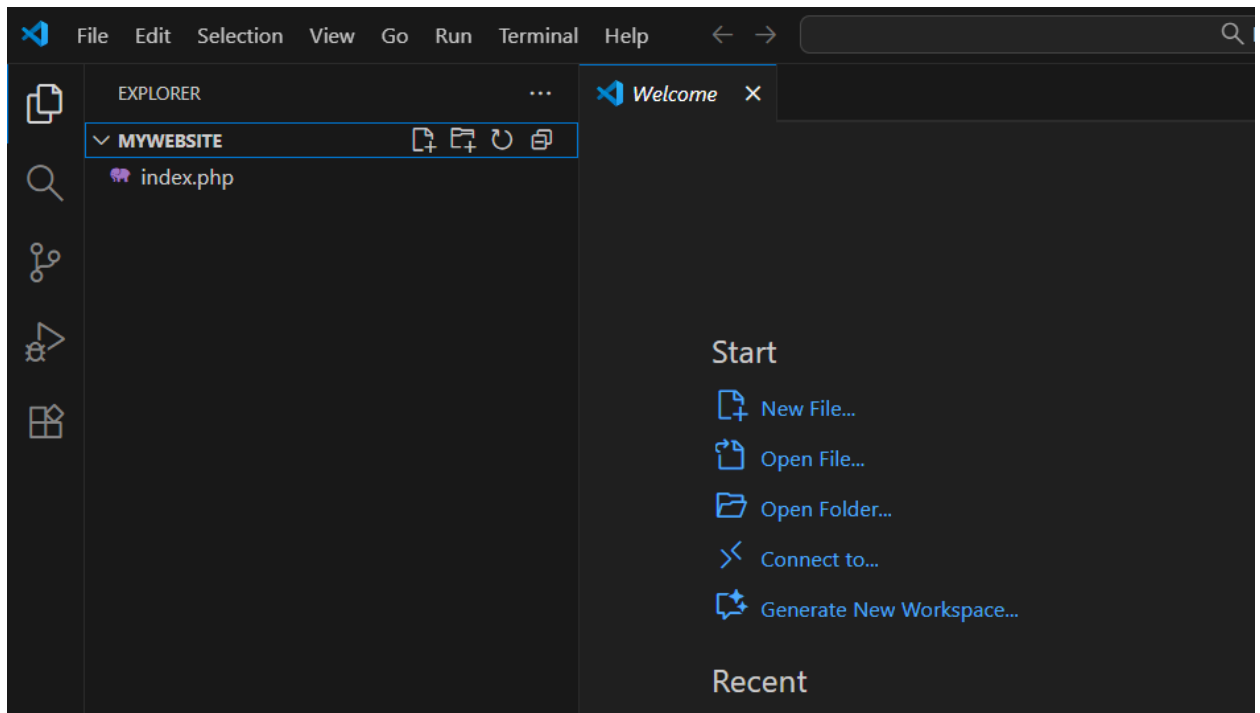

- **Locate your root folder.** Open the XAMPP Control Panel and click the **Explorer** button to navigate to your installation directory, typically **C:\xampp\** on Windows.

- **Find htdocs.** Open the htdocs folder. This is the root directory for all your web projects.

- **Create a project folder.** Create a new folder inside htdocs for your project (e.g., C:\xampp\htdocs\MyWebsite(any name you set)).
- **After creating the Filename inside htdocs, open your VS CODE app then**
- **Then locate this folder as show in the image below**

- **Save your projects**
  - you need to save your files in the correct directory.
- Create at least one sample code using the following.
  - Concatenate String

```
<!DOCTYPE html>
<html>
<body>

<?php
$x = "Hi";
$y = "How are you";
$z = $x . $y;
echo $z;
?>

</body>
</html>
```

- Math Functions
- Loops
- Constants
- PHP Superglobals
- Sample Form Handling

```
<!DOCTYPE HTML>
<html>
<body>

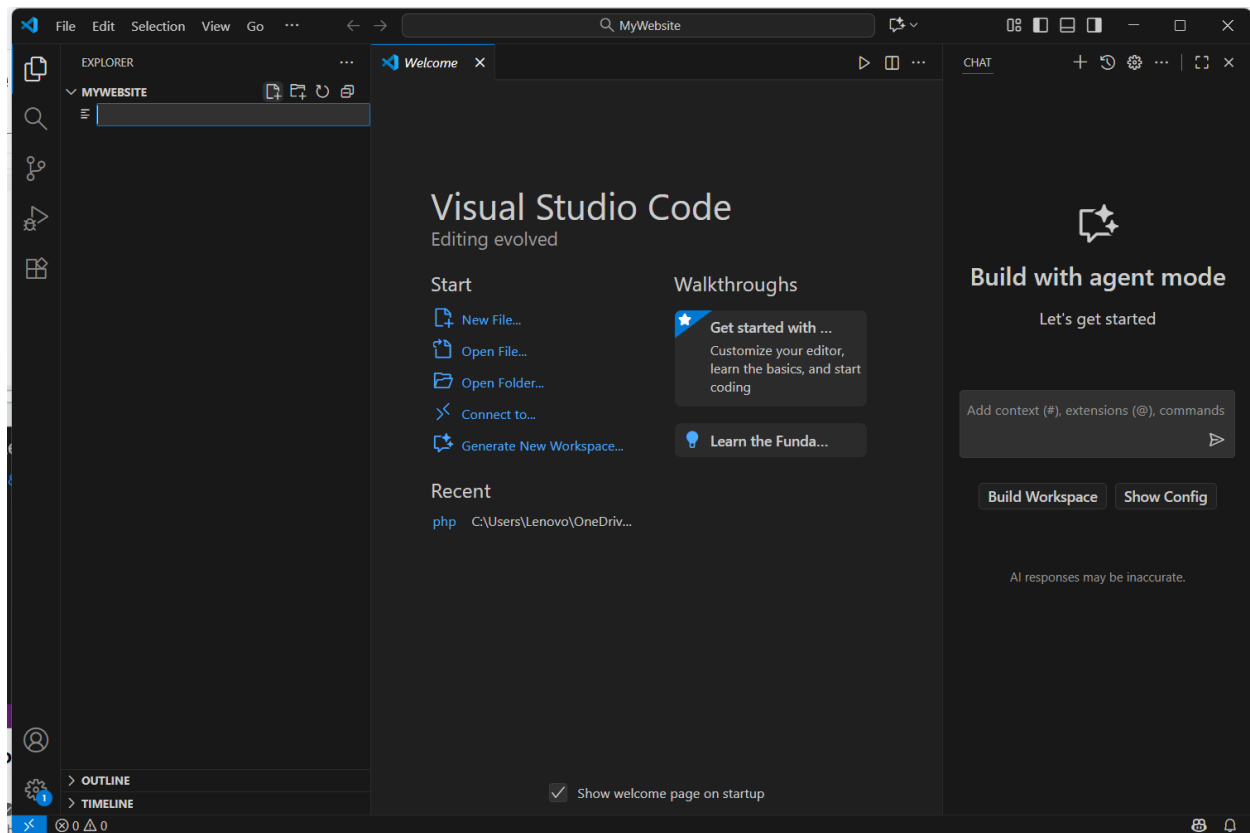

<form action="welcome.php" method="post">
Name: <input type="text" name="name"><br>
E-mail: <input type="text" name="email"><br>
<input type="submit">
</form>

</body>
</html>
```

Note: Don't forget to save your sample with PHP extension (e.g index.php)

- Display an output for each sample
- **Access your project.** To view your website, go to your browser then type <http://localhost/MyWebsite> (or the name you set) . If you created a specific file, such as index.php, you would visit <http://localhost/MyWebsite/index.php> (or the filename you saved)

## Activity 2 – Laboratory Activity

### Concatenate String

```
index1.php X
index1.php > html > body
1 <!DOCTYPE html>
2 <html>
3 <head>
4   <title>My Activity For Today</title>
5 </head>
6 <body>
7 <h1>Activity</h1>
8
9 <?php
10
11 $firstName = "JohnMark";
12 $lastName = "Mendoza";
13 $fullName = $firstName . " " . $lastName;
14 echo "<h2>Concatenate String</h2>";
15 echo "Full Name: " . $fullName . "<br>";
16
```

# Concatenate String

Full Name: JohnMark Mendoza

```
echo "<h2>Math Function </h2>";
$a = 5;
$b = 10;
$sum = $a + $b;
$product = $a * $b;
echo "Sum: $sum<br>";
echo "Product: $product<br>";
echo "Square Root of 16 is " . sqrt(16) . "<br>";
echo "Random number (1-50): " . rand(1, 50) . "<br>";
```

## Math Function

Sum: 15  
Product: 50  
Square Root of 16 is 4  
Random number (1-50): 25

```
echo "<h2>Loops </h2>";

echo "<b>For Loop:</b><br>";
for ($i = 1; $i <= 5; $i++) {
    echo "Number: $i <br>";
}
```

## Loops

**For Loop:**  
Number: 1  
Number: 2  
Number: 3  
Number: 4  
Number: 5

```

echo "<h2>Constants </h2>";
define("SITE_NAME", "My PHP Example Site");
const VERSION = "1.0.0";
echo "Site Name: " . SITE_NAME . "<br>";
echo "Version: " . VERSION . "<br>";

```

## Constants

Site Name: My PHP Example Site  
Version: 1.0.0

```

43
44
45 echo "<h2>PHP Superglobals </h2>";
46 echo "Server Name: " . $_SERVER['SERVER_NAME'] . "<br>";
47 echo "Script Filename: " . $_SERVER['SCRIPT_FILENAME'] . "<br>";
48 echo "User Agent: " . $_SERVER['HTTP_USER_AGENT'] . "<br>";
49

```

### PHP Superglobals

Server Name: localhost  
Script Filename: C:/xampp/htdocs/myactivity/index1.php  
User Agent: Mozilla/5.0 (Windows NT 10.0; Win64; x64) AppleWebKit/537.36 (KHTML, like Gecko) Chrome/141.0.0.0 Safari/537.36 Edg/141.0.0.0

```

?>
<h2>Sample Form Handling</h2>
<form method="POST" action="">
  <label>Name:</label>
  <input type="text" name="name" required><br><br>
  <label>Age:</label>
  <input type="number" name="age" required><br><br>
  <input type="submit" name="submit" value="Submit">
</form>

<?php
if (isset($_POST['submit'])) {
  $name = htmlspecialchars($_POST['name']);
  $age = htmlspecialchars($_POST['age']);
  echo "<h3>Form Submitted!</h3>";
  echo "Hello, $name. You are $age years old.<br>";
}
?>

```

### Sample Form Handling

Name:

Age:

#### Form Submitted!

Hello, dsd. You are 22 years old.
